

Make a "mind map" that covers all the concepts/facts/details in the Intermolecular Forces chapter and the Balancing and Types of Reactions chapter.

- You need to use color to help chunk the information
 - Connect topics that are related to each other with lines
 - Make sure you list DETAILS and FACTS not just topics
 - Include 5 practice problems in your mind map that are similar to the kinds of things you think you will find on the Exam.
- Here are a couple examples – these are not a chemistry example! It is meant to show you what yours should look like, the level of detail expected, etc.
