

1) Is this reaction exothermic or endothermic?

2) What is different about the equation below?

What do you think the difference means???

↔ Equilibrium! ↔

Some reactions can go forwards AND backwards

OR

↔ Equilibrium! ↔

- EQUILIBRIUM = the point at which the forward reaction is happening at the same RATE as the reverse reaction
- Are the CONCENTRATIONS of reactants and products the same?????
 - NO!!!!!!

↔ Le Chatelier's principle ↔

If a stress is applied to a reaction at equilibrium
the reaction changes to relieve that stress

How do you “Stress” a reaction???

↔ Le Chatelier's principle ↔

Change:

Temperature

Concentration

Pressure

↔ Let's Change the Concentration! ↔
