## Boyle's Law

1) If I have 5.6 liters of gas in a piston at a pressure of 1.5 atm and compress the gas until its volume is 4.8 L , what will the new pressure inside the piston be?
2) I have added 15 L of air to a balloon at sea level ( 1.0 atm ). If I take the balloon with me to Denver, where the air pressure is 0.85 atm , what will the new volume of the balloon be?
3) I've got a car with an internal volume of $12,000 \mathrm{~L}$. If I drive my car into the river and it implodes, what will be the volume of the gas when the pressure goes from 1.0 atm to 1.4 atm ?

## Boyle's Law - Solutions

1) If I have 5.6 liters of gas in a piston at a pressure of 1.5 atm and compress the gas until its volume is 4.8 L , what will the new pressure inside the piston be?

$$
\begin{gathered}
\mathrm{P}_{1} \mathrm{~V}_{1}=\mathrm{P}_{2} \mathrm{~V}_{2} \\
(1.5 \mathrm{~atm})(5.6 \mathrm{~L})=(\mathrm{x})(4.8 \mathrm{~L}) \\
\mathrm{x}=1.8 \mathrm{~atm}
\end{gathered}
$$

2) I have added 15 L of air to a balloon at sea level ( 1.0 atm ). If I take the balloon with me to Denver, where the air pressure is 0.85 atm , what will the new volume of the balloon be?

$$
\mathrm{P}_{1} \mathrm{~V}_{1}=\mathrm{P}_{2} \mathrm{~V}_{2}
$$

$(1.0 \mathrm{~atm})(15 \mathrm{~L})=(0.85 \mathrm{~atm})(\mathrm{x})$

$$
x=18 \mathrm{~L}
$$

3) I've got a car with an internal volume of $12,000 \mathrm{~L}$. If I drive my car into the river and it implodes, what will be the volume of the gas when the pressure goes from 1.0 atm to 1.4 atm ?

$$
\mathrm{P}_{1} \mathrm{~V}_{1}=\mathrm{P}_{2} \mathrm{~V}_{2}
$$

$(1.0 \mathrm{~atm})(12,000 \mathrm{~L})=(1.4 \mathrm{~atm})(\mathrm{x})$

$$
x=8600 \mathrm{~L}
$$
